

IN THE CLAIMS

Please cancel claims 1, 9, 15-19; please amend Claims 2, 3, 5, 7-8, 10-14; and please add new claims 20-24, where marked-up version of the amended Claims is attached as Appendix A:

Sub B1
A2
2.(AMENDED) The method of claim 20 comprising enabling to download the control data from the server to the device upon access by the device to the server.

3. (AMENDED) The method of claim 20, further comprising enabling to download the control data from the server to a further system of the user for programming the device upon transfer of the control data from the further system to the device.

A3
5. (AMENDED) The method of claim 20, wherein the user accesses the server via a further system different from the device.

A4
7.(AMENDED) The method of claim 5, wherein the user accesses the server through the further system from a location remote from the device.

8.(AMENDED) The method of claim 7, wherein the user requests the server to establish contact with the device and the server establishes the contact in response to the user's request.

A5
10.(AMENDED) The method of claim 20, wherein the device comprises at least one of the following: a personal video recorder, an audio jukebox, a television set, a home entertainment system.

11.(AMENDED) The method of claim 20, wherein the user is enabled to interact with the server via speech input.

12.(AMENDED) The method of claim 20, wherein the user is enabled to specify the preference to a human operator who interacts with the server based on the user's preference.

13.(AMENDED) The method of claim 20, wherein:
- the server has a data base with information relating to the user and acquired prior to the user entering the preference; and
- the generation of the control data takes into account the information in the data base.

14.(AMENDED) The method of claim 20, comprising enabling a second user to program the device for operation according to a further preference of the second user, the method

Sub B1
AP
Ind
comprising enabling the second user to interact via the network with the server for generating further control data to program the device according to the further preference.

A6
Sub B1
20.(NEW) A method of enabling a user to configure a device, the method comprising:
providing user-access to a server over a network to enable the user to enter a preference for configuration of the device, the preference includes a user-selection respecting a processing and a play out at the device of multimedia content that will be received by the device;
generating control data from the entered preference for configuration of the device according to the entered preference;
sending the control data onto the device causing an initiation of the device configuration to enable processing and play out of multimedia content according to the entered preference.

21.(NEW) The method of Claim 20, wherein the user-selection comprises a selection for processing by the device of one of various pieces of multimedia content that will be received by the device.

22.(NEW) A device comprising:
a connector for receiving control data having been generated by a server from an entered user preference for configuration of the device, the preference including a user-selection respecting a processing and play-out at the device of multimedia content;
a configuration unit for initiating a configuration of the device based on the control data;
and,
a processing unit for processing and play out of multimedia content received by the device according to the user preferences.

23.(NEW) The device of claim 22, wherein the device further comprises a personal video recorder.

24.(NEW) The device of Claim 22, wherein the connector gains access to the server and receives the control data from the server upon gaining access to the server.
